

Linguistics

UNIVERSITY OF TORONTO

Researcher Dr. Daphna Heller., Department of Linguistics, daphna.heller@utoronto.ca

What is the goal of the study?

The purpose of this study is to learn about how people understand and communicate with each other.

What do I need to do?

If you choose to participate, you will be shown some videos where a speaker talks to you. You will need to respond with either “yes” or “no”. Then there will be an attention check to make sure you paid attention to the video and the speaker.

Are there risks or benefits to participating?

Risks: There are no known risks associated with this experiment.

Benefits: You will be compensated for your time.

Voluntary Participation

Participation in this study is voluntary. You can choose not to participate, or to withdraw at any time, for any reason without penalty or loss of benefit to which you are otherwise entitled. In the event that you do withdraw from the study, we will delete your responses from our records.

What type of personal information will be collected?

A web interface will record the responses you choose. We will also ask you for your age, education and the languages you speak and your level of fluency. We do not ask for your name or any other identifying information. If you are participating in this survey through Amazon’s Mechanical Turk or Prolific, the identifying information you provide to that service will not be shared with us.

What happens to the information collected?

The results of this research may also be published in a scholarly publication and/or reported in a scientific presentation. Sharing data and findings is considered best scientific practice and is a requirement of many scientific journal and our Canadian funding agencies. As a large proportion of research is publicly funded, the outcomes of the research should be made publicly available. Sharing data helps to maximize the impact of investment through wider use and encourages new avenues of research. Therefore, when data collection is complete, the instructions you gave may become “open data”. This means it will be stored in an online database so that it is publicly available. We will not include any other information in the public data.

Questions/Concerns?

- If you have further questions about this study and/or about your participation, please contact Dr. Daphna Heller, Dept. of Linguistics, daphna.heller@utoronto.ca
- If you have questions about your rights as a participant, you may contact the Ethics Review Office, 416-946-3273 or ethics.review@utoronto.ca
